

# IntelliKeys USB Keyboard: Tutorial- Part 3

## IntelliKeys with Customized Overlays

### 1. Overlays sent in a Group

Custom overlays created in other programs for specific activities can be sent to the IntelliKeys keyboard. Programs used to create these overlays include Overlay Maker, IntelliTalk, IntelliPics, and ClickIt!

A group of overlays can be sent to the keyboard and stored without the need to resend each time the overlay is used.

1. To use overlays that have been sent to IntelliKeys in a group, insert the Setup USB Overlay.
2. Press the Custom Overlay Level 1-15 key.
3. Press the number of the overlay that you wish to use, using the number pad.
4. Remove the Custom Overlay and insert the customized overlay.

### 2. Use with Commercial Software

Some commercial software programs made by IntelliTools and other publishers come with printed overlays that work when you load the software. These overlays are automatically sent to the IntelliKeys keyboard.
